

- 5. After successfully teaching the Origin, +X axis, and XY, click **Set** to write the data to the controller and create the User Frame.

Note: you can also input values directly to the table, and then click **Set** to create the User Frame.

User Frame

ID :

1

Type :

Orthogonal

Inclined

Input : (1). Use "teach" button

	X(mm)	Y (mm)	Z (mm)
Origin	520.000	175.000	-200.000
+ X axis	530.776	175.000	-200.000
▸ XY	530.776	202.374	-200.000

(2). Set /Get user frame data

- 6. To check if the data is successfully written, select the ID of the User Frame you just set, and click **Get** to read the User Frame stored in the controller from the table.

Important: if you select the User Frame ID which does not contain any data for performing jogging, then the alarm E1.82A (Switching error of user's coordinates system) is triggered.
