

3.6 Upload projects

Upload the PC projects to the controller, so that the controller can operate the projects through System DIs and communication *1 without connecting to the PC.

1. Select the check boxes for the projects you want to upload.*2
2. Click  (upload).
3. When the selected projects are shown in the controller project list, it means the projects are successfully uploaded.

Note:

- *1. Update the controller project list before reading the controller projects.
- *2. It is suggested that you run test of the projects on the PC first to make sure the robot moves correctly, and then upload the projects to the controller.
