

5.1.5 Teach (Quick Teach)

Use the Quick Teach function to set the type of motion (MovP or MovL) and the moving speed.

■ MovP

Select **MovP** for the Motion, set the Speed (ranging from v1 to v100 in units of %), and then click **Teach**. Click **YES** in the confirmation window, and then the MovP instruction is added to the program.

■ MovL

Select **MovL** for the Motion, set the Speed (ranging from v1 to v2000 in units of mm/sec), and then click **Teach**. Click **YES** in the confirmation window, and then the MovL instruction is added to the program.
