

10.4 Backup

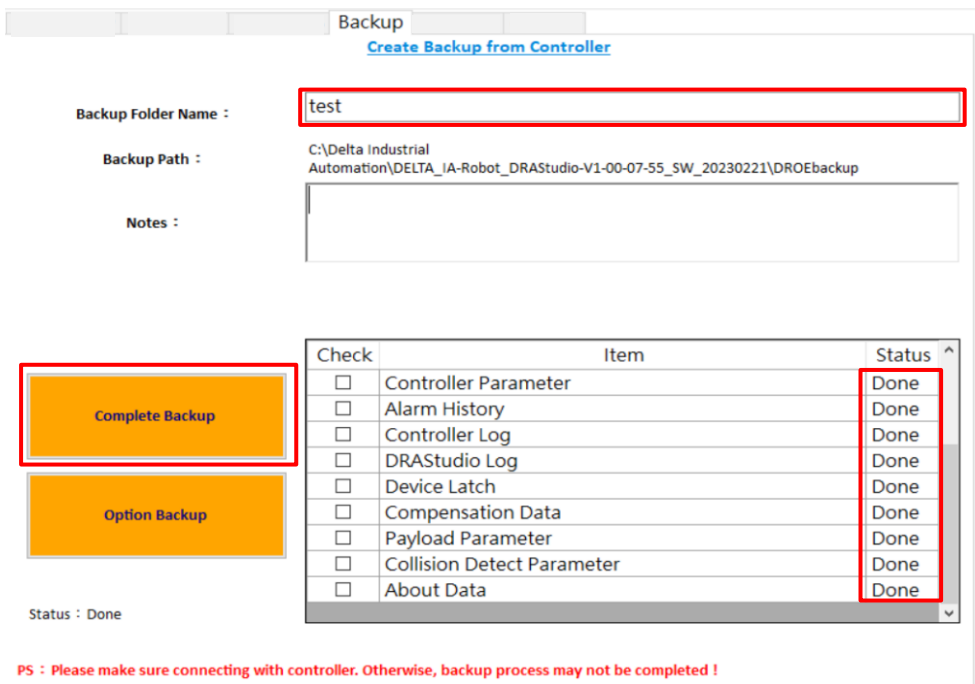

1. Enter a name in the Backup Folder Name field first (only English letters and numbers can be used for naming the folder). If necessary, you can add any descriptions in the Notes field. The Backup Path is the DROEbackup folder under the installation folder.

2. To back up all the robot data to the PC, click **Complete Backup**^{Note}. To back up part of the data, select the check box(es) for the specific item(s), and then click **Option Backup**.

Note: the Recovery function described in Section 10.5 is available only when you back up data with the Complete Backup function.

3. After the backup is complete, the Status column of the table shows “Done”.

Important: make sure the robot connection is stable during backup, or the backup may fail.
