

- S indicates the shoulder condition of the robot, and there are two conditions.
Determined based on the position of J5 (the blue dots in the following figures). The robot is in the shoulder back condition (S: 0) when J5 is on the right side of the J1 rotation center axis (the dashed lines in the following figures); the robot is in the shoulder front condition (S: 1) when J5 is on the left side of the J1 rotation center axis.

Shoulder back, S: 0 J1 axis is at 0° 	Shoulder front, S: 1 J1 axis is at 0° 
Shoulder back, S: 0 J1 axis rotates more than ±90° 	Shoulder front, S: 1 J1 axis rotates more than ±90°
