

- If you desire to use this User Library file in all the projects, right-click the [UserLibrary] folder in the PC project list, and then click **Add Exists**.

- Select the file to be added.

- Then, the system automatically copies the selected file to the [UserLibrary] folder under the installation folder. Meanwhile, DRASudio updates the UserLibrary list of the PC.
- Upload the User Library file in the [UserLibrary] folder to the controller.

- After the file is successfully uploaded, the user-defined functions in this User Library file can be called in every project.
