

4.3.1 JRC (Joint Rotation Count)

The JRC is the rotation count of an axis, which records the position of the rotation axis for SCARA and VA robots.

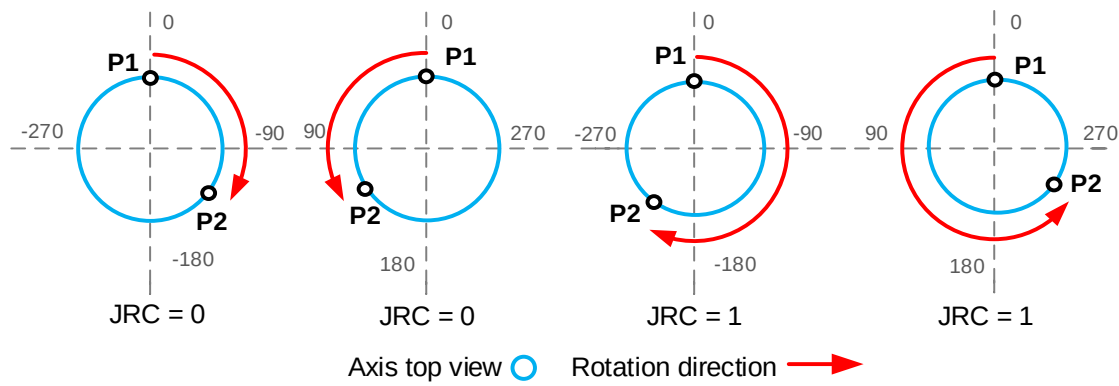

Table 4.3.1.1 JRC value and the corresponding rotation angle

JRC value	0	1	2	3
Rotation angle	$-180^{\circ} \leq \text{rotation angle} < +180^{\circ}$	$180^{\circ} \leq \text{rotation angle} < 360^{\circ}$	$360^{\circ} \leq \text{rotation angle} < 540^{\circ}$	$540^{\circ} \leq \text{rotation angle} < 720^{\circ}$
		$-360^{\circ} \leq \text{rotation angle} < -180^{\circ}$	$-540^{\circ} \leq \text{rotation angle} < -360^{\circ}$	$-720^{\circ} \leq \text{rotation angle} < -540^{\circ}$

When point teaching is performed, the JRC value is simultaneously saved in the point data.
